Experiment Station

GENERAL TECHNICAL
REPORT PSW- 29

Paine, Lee A.

1978. **Coding hazardous tree failures for a data management system.** Gen. Tech. Rep. PSW-29, 108 p., illus. Pacific Southwest Forest and Range Exp. Stn., Forest Serv., U.S. Dep. Agric., Berkeley, Calif.

Codes for automatic data processing (ADP) are provided for hazardous tree failure data submitted on Report of Tree Failure forms. Definitions of data items and suggestions for interpreting ambiguously worded reports are also included. The manual is intended to insure the production of accurate and consistent punched ADP cards which are used in transfer of the data to magnetic tapes. The codes and card format specified are compatible with the computer processing and analysis programs provided in a user's guide, General Technical Report PSW-24. The guide covers use of the codes to specify the desired categories and ranges of data (species, diameters, organization, areas, times, conditions, etc.) to be included in analyses.

Retrieval Terms: hazard trees; hazard reduction; recreation areas; urban forestry; safety standards; data management; computer programs; coding.

The Author

Lee A. Paine is a forest pathologist, stationed in Berkeley, studying problems in forest tree diseases, particularly in relation to evaluation and control of public hazard and safety on wooded recreation sites. He came to the Pacific Southwest Station from the Canadian Science Service in 1957. He holds bachelor's (1943) and master's (1947) degrees in forestry from the University of Idaho and a doctorate (1951) from the Swiss Federal Institute of Technology.

Acknowledgment

A manual such as this necessarily embodies many suggestions and modifications by the originators and users. I am grateful to the forestry, biology and statistical aids, both graduate and undergraduate students at local universities, who have made the coding manual easier to use by discovering inconsistencies and ambiguities. Their work has improved the data coding process and, in the end, the reliability of data analyses. In particular, I thank Richard D. Boothe, who was largely responsible for the forest type code condensation and descriptions.

This manual is a tool for establishing files in the data management system for hazard control described in a separate user's guide¹. Information supplied on the "Report of Tree Failure" (fig. 1) must be interpreted and coded so that accurate data processing cards may be produced in a format compatible with the programs used for computer processing and analysis. These programs are available on request, as indicated in the user's guide.

After cards are punched, they are put in sequential order for screening by the ERROR CHECK program

(see the user's guide). For most uses, the verified data are then transferred to computer tapes. From these, analyses in tabular form may be obtained through the FAILURE program, or selected cards or limited-data tapes may be re-created from the master tapes. In all phases of the data management system, accurate coding, transcription, and card-punching are essential; errors may interfere with proper operation of the computer programs or produce misleading results in analyses.

GUIDELINES FOR CODING

A first step in preparing for the coding process is to gather together useful references to supplement the coding manual itself. Such references include maps showing county, agency, and city boundaries and recreation site locations; silvics references with species distribution maps; dendrology manuals; check lists for technical nomenclature and for common and local names; references describing the flora of specific

areas; and "blue books" with prices of new and used items including automobiles and recreation vehicles.

For automatic data processing (ADP), each valid report of tree failure is first coded on the report form itself, following codes given in this manual. Then the information on the report is punched on ADP cards, as described under "Format for ADP Cards." Codes are needed for most items on the report, and for a few additional items not indicated on the report form itself. Codes for these additional items are determined as explained under "Coding Specific Items."

The report form shown in figure 1 (modified to include labeled spaces for coding) has the advantage of eliminating a step in preparation of the punched cards—the transcription of codes to a worksheet. A

 Property loss estimate \$ _____
 Injuries: ^{(D) not give use value} _____
 Medical attention required _____
 Fatalities _____

Only failures of a size capable of inflicting some damage or injury should be reported. Minor limb failures should not be reported unless they were potentially dangerous. Do not report simple droop of a live or part of a live stem or part of a live stem arrested in physiological活力. Defects related primarily to disease should not be reported.

- ① A report should be made for:
- (1) each tree failure involving property damage or bodily injury;
 - (2) each failure adjacent to permanent recreation facilities, home sites, or other locations where failures are a threat to property, and;
 - (3) each failure on recreation sites and other high use locations during the season of public use, whether or not the failure causes damage or injury.
- ② Check only those defects and contributing factors which lead to the actual failure.
- ③ Other established public use site: Winter sports, beaches, viewpoints, visitor centers, historical buildings, etc.
- ④ Volunteer site: Undeveloped site with concentrated public use.
- ⑤ Special use site: Resorts, service facilities, etc.
- ⑥ Residence site: Agency, private, or permittee-lessor.
- ⑦ Other: Wilderness area sites, open forest, etc.
- ⑧ Published analyses will not indicate the source of specific incidents.

If many failures occur in your area, reports may be limited to managed sites normally subject to inspection and hazard control. Where information is available, however, reports from volunteer and other noninspected sites will be of value.

NOTE: A SEPARATE FORM SHOULD BE COMPLETED FOR EACH INDIVIDUAL FAILURE. Inclusion of more than one failure on a report prevents correlation of data unless all details are identical.

Additional forms may be obtained from your headquarters or by writing to the following address:

Figure 1—For data management, reports of tree failures and accidents are submitted on a form patterned after the U.S. Forest Service Form PSW-4600-3. As shown here, the arrangement of the original form has been modified to indicate the ADP card location of codes for each item. Labeling of the spaces (see "Format for ADP Cards") shows the card number (1 or 2) at left, followed by the column numbers of the appropriate field. Use of this modified form eliminates a step in the process of ADP card preparation: cards are punched directly from the report form rather than from codes transcribed to a worksheet. (Note: For convenient duplication, master copies of the form are provided at the end of this report.)

saving in time required for the coding and punching process results, but accuracy may be reduced somewhat if the transcriber would otherwise recheck the coding. The ERROR CHECK program will detect many coding mistakes in the punched cards.

Problems in Interpreting Reports

Every effort should be made to obtain complete and accurate information for all entries on the Report of Tree Failure before coding is started. This may require additional communication with the office or individual responsible for the report, or judicious reference to earlier reports from the same site or area. It is essential to check the comments on any attached letters to see if they agree with information given in the report itself. The genus (and species), the DBH (tree diameter at breast height), and the class of failure are especially important. If any of these items is unobtainable, the report loses much of its value and may not be worth coding. A report covering a serious accident is an exception—available data, even if incomplete, should be coded.

In general, the coding sequence should follow the order of items on the Report of Tree Failure (*fig. 1*). The code lists in this manual are arranged for convenient use. The long lists—species, forest type, agency, and state and county—are given in separate sections in the sequence in which they occur on the report. The shorter code lists for all other lettered items on the report are given in the opening section titled "Codes for Failure Report—Outline." Reference to these short lists is not often required, because most of these codes are either reported numerically (such as approximate DBH) or follow a sequential pattern determined by the number of entries for the item. (Thus, under item B, class of mechanical failure, an entry for upper bole is coded as 1, for lower bole as 2, and so on.)

Two departures from the general arrangement have been made for convenience in use of the manual. The list titled "Tree Species Codes—Numeric" is used in assigning codes to new species and to avoid assignment of the same code to more than one species. It is placed at the end of the manual so that it will not be confused with the more frequently used list, "Tree Species Codes—Alphabetic." The "Target Value Guide" is used in coding most accidents, and is therefore placed near the front of the manual.

Note that the lists given in this manual are not complete in the absolute sense. Generally, they represent only the species, sites, etc., for which data have been received in the past. Provision for expansion is

evident in some lists (ex.: species); in others, new, unlisted code numbers should be established by analogy with related listed codes.

In assigning codes to information given in reports, be a bit skeptical. Most reporting errors arise from misunderstandings. You will soon become familiar with common misinterpretations, and will learn to reconstruct the reports in terms of usable information.

Any changes on the report form from the way it was submitted should be marked in red (and initialed), with the original lined out. That will make it clear that the change was intentional and was made by the coder.

The following notes are referenced to the Report of Tree Failure.

Validity of Failure

Inspect each failure report first to insure that it represents a true mechanical failure (not a tree mortality without failure, or hazard control work prior to failure).

Reports of dead or dying trees which apparently do not represent actual mechanical failures should not be coded unless the failures can be verified by a followup to the originator. Indications that the report may not represent a true failure include:

- No class of failure reported
- Tree dead (snag) reported under defect or fault
- No contributing factors noted
- Notes in the comments section: for example, "14 trees died from spring floods," or "many trees dead or dying; will be removed before recreation season."

Multiple Reports

Although directions on the form request that only one tree failure per form be reported, "multiple" reports are occasionally received—that is, a number of failures are recorded on a single form. Such reports frequently represent a catastrophe.

For a multiple report, try to code each tree accurately for punching as a separate report. The simplest procedure is to fill out and number an additional blank form for each tree failure coded. If data are insufficient to code all trees individually, and additional information cannot be obtained from the originator, fill out only as many forms as there are individual failures justified by reliable data. On each form, for the coding item "number of trees," enter the sum of 1 (for the failure coded) plus a proportional share of the number of failures not coded. The total "number of trees" coded from a multiple report will thus include the individually coded failures plus associated uncoded failures.

Unknown or Unreported Data

Missing information decreases the value of a report for analysis. Do your best to reconstruct each item of information on the report form before coding it as unknown. If an item is properly reported as unknown, or not reported at all, code it using 9's. (Ex.: if age is left blank on the report, code as 999.)

There is one exception: in item C, tree defect or fault, the code for "unknown" is 16. "Unknown" classification (9's) is not "permissible" for certain items. This means that the item will be identified as illegal in the ERROR CHECK program if it is coded as unknown. If no other code can be entered, decide whether the report should be included in the data file or discarded because it is incomplete. Items on the report for which "unknown" is not normally permissible include the following:

Reporting Agency: If the lowest administrative level for the reporting agency is not given and cannot be traced, do not use 9's. Instead, code the report as though it had come from the next higher level of that agency. (Ex.: for a report from the Tonto National Forest in Arizona giving no Ranger District, code the agency as Tonto NF, or 01307 00. If, however, it is apparent from the campground name and the county that the report is actually from the Pleasant Valley Ranger District, write in the full code, which is 01307 05.)

- A. Under *tree and stand*: Species, approximate DBH of tree
- B. *Class of mechanical failure*
- C. Under *time and location of incident*: Site open; Year; State and county G. Site category
- D. *Property or person affected*
- E. *Consequences* (Exception: "Cleanup work required" is always coded 9 for a failure without accident.)

Certain other items not provided for on the report but requiring coding should not normally be coded as unknown:

Estimated value of property involved in accident.

Total value for property and individuals in accident. If no accident is involved, these items are not coded.

Dimensions Exceeding Field Size

For certain data items shown as dimensions (age, DBH, loss estimate, etc.), values reported may exceed the number of digits allowed (see "Format for ADP Cards"). For these, use the appropriate number of 9's followed by an 8. (Ex.: for a report on a 2,000-year-old redwood, code the age as 998, even though the true age exceeds the allowed three digits. Do not code as 999,

which would indicate an unknown value. In this procedure, be sure to copy the true figure—here "2,000 years old"—into the comments section for punching on the ADP card.)

Coding Specific Items

Certain items present difficulties in coding. These suggestions may be helpful. The items on the report form are discussed under the major headings on the form itself. Additional items that must be coded (Failure Category, Estimated Property Value, Total Value, and Number of Trees) are also discussed.

Reporting Agency and Unit

Reports by an agency of failures which occurred on private land or on land of another agency usually should indicate the actual land ownership (ex.: "Private" or "Kale County Park"). Exceptions occur when the reporting agency has assumed some administrative or legal responsibility for the site, including inspection or maintenance, and could be held liable for damages (ex.: State and Private Forestry, U.S. Forest Service). The reporting agency should then be coded, to permit retrieval and analysis of all pertinent data by the managing agency. The actual category of ownership is coded under item F, Land Ownership (see below).

A. Tree and Stand

Species—Coding the tree species is often a source of trouble, largely because there may be many common names for a single species, and because ranges overlap among similar species. Experience simplifies this task. A number of reference books provide common names, genus and species, and natural ranges for trees native to the United States. Although codes allow for broader classifications, try to determine the species of the failing tree or, at the very least, the genus. If the genus is given, but not species, the tree may be coded as an unidentified species for that genus. (Ex.: if the report shows pine, and the species cannot be determined, code it as "pine, unidentified": 010). If the genus cannot be determined and the tree cannot even be classified as either softwood or hardwood, do not code the report.

DBH—For diameter at breast height, be sure that the figure is coded in inches rather than feet or meters. (Ex.: if DBH is given as 3 and age as 175 years, 3 feet may usually be assumed to be intended, rather than 3 inches. Code as 36 inches.)

Age—When age is not reported, code as 999.

Forest type—The codes provided here cover broad groupings of forest types. Many agencies have their own systems of forest types, which can be interpreted in terms of our classification. For example, types are often given initials denoting economically important species, such as DF (Douglas-fir). Again, the "type" may be denoted by timber grade, such as grade B sawtimber. Assignment of our type codes should be determined according to (1) species of tree, (2) associated species, (3) location, (4) past reports from the same location, and (5) the type specifications given under "Forest Type Descriptions."

Stand age class—General rule of thumb: if a report does not show all-age, but does show two or more other age classes, code as the oldest age class shown; if all-age is shown as well as young, mature, or overmature, code as all-age.

Elevation—Elevation is occasionally reported in meters above sea level; this value must be converted to feet before coding. Check other sources for elevation if in doubt. (1 meter = 3.28 feet.) Note, however, that the abbreviation msl stands for mean sea level and does not specify the unit of measurement.

B. Class of Failure

The reported class of mechanical failure should be taken at face value unless there is reason to believe that the reporter misunderstands the breakdown of classes (as when a note in the comments indicates a class of failure other than that reported). Occasionally more than one class of failure is checked on a single failure report. Since only one can be coded, choose whichever is listed first in the following sequence: uprooting, butt, lower bole, upper bole.

C. and D. Tree Defect and Contributing Factors

Predisposing defects and contributing factors checked on the form should not be accepted when it is clear that they were not directly and immediately involved in the mechanical failure of the tree.

Occasionally, the defects or factors checked contributed to earlier damage or decadence of some part of the tree, but not immediately to the reported failure. Insects, for example, may kill a tree, but are seldom the proximal cause of failure. Deterioration and decay more commonly cause the critical loss of strength and stability. Involvement of related but more remote factors, such as insect kill, may be written into the Comments and underlined for punching on the ADP card.

Reports are sometimes submitted with information in defects (C) or contributing factors (D) which apparently conflicts with the failure class that was reported. (Ex.: a limb failure may be reported as associated with

soil saturation. Soil saturation would normally contribute only to uprooting of the tree. Similarly, a butt failure would not be caused by a dead top.) If such conflicts appear to result from misinterpretation, assume that the failure class is correct, delete the conflicting defect or contributing factor as nonresponsive, and code as unknown, unless other appropriate defects or contributing factors are indicated.

Potentially conflicting associations of defects and contributing factors are identified by the ERROR CHECK program, as follows:

<i>Class of failure</i>	<i>Defects</i>	<i>Contributing factors</i>
Upper bole	Twin bole or basal fork	Erosion Soil saturation Stream bank erosion Shallow rooting
Lower bole	Fork or multiple top Dead top or branch	Erosion Soil saturation Stream bank erosion Shallow rooting
Butt	Fork or multiple top Dead top or branch	Erosion Soil saturation Stream bank erosion Shallow rooting
Limb	Sweep Lean Twin bole or basal fork	Erosion Soil saturation Stream bank erosion Shallow rooting
Uprooting	Fork or multiple top Twin bole or basal fork Dead top or branch Canker, rust Canker, mistletoe	

Tree-striking-tree failures present special problems. In this type of failure, a tree fails and strikes a second tree as it falls (or, more rarely, several trees), causing the failure of the second tree. Only the tree which was hit is coded with tree-striking-tree (7) as a contributing factor. The report number of the first tree, which did the striking, should be included in the comments field of the report for the second tree. If wind is also given as a contributing factor for the second tree (the tree which was struck), it should be accepted only if the class of failure was lower bole, butt, or uprooting.

When two trees are involved in an accident through one tree striking another, the accident and the full amount of damage are attributed to the first failing tree.

"Unknown" should be accepted only if no other defect (or contributing factor) is checked. (Ex.: a re-

porter may check both "wind" and "unknown" as contributing factors. Because wind is reported as contributing to the failure, "unknown" should be deleted, and "wind" should be coded.)

E. Time and Location

Approximate hour—If approximate hour is reported as midnight, code as 24.

Month and year—Month and year are often given in vague terms, such as "winter 1970." Make an estimate (0170), if justified, or code the month as "unknown" (9970).

Site open—If "site open for public use" is reported negative, accept it as correct unless there is some clear indication that the site was indeed being utilized.

F. Land Ownership

Telephone and power line rights-of-way are coded as public utilities.

G. Site Category

Be sure that sites are correctly described.

Other established public use site—Includes parking lots.

Special use site—Includes a ski lift belonging to a permittee-concessionaire.

If "other" is checked but description shows that the site belongs in a specific category, correct the report. (Ex.: report shows "Ranger's house" or "Fern Grove Trail." Change the entry and code it as "residence site" or "marked trail.")

H. Property or Person Directly Affected

Agency—Code as "agency" if there were no significant consequences resulting from the failure, or if consequences were damage to agency property. This does not include property owned by recreationists or profit-oriented installations.

Recreationist—Property or person affected is sometimes listed on a failure report as "recreationist" despite the fact that no recreationist was directly affected. Unless there was some injury or loss to a recreationist, the person affected is not "recreationist."

Code as "recreationist" if damaged property was owned by individuals and not used for income production (ex.: summer cabins on a Forest Service summer home tract). All injuries or fatalities are coded as recreationist losses regardless of incidental damage to agency or commercial property.

Some accidents involve both agency and recreationist property loss. Such losses are coded "recreationist" unless the agency sustains 80 percent or more

of the total damage. (Ex.: if a tree falls and destroys an agency cabin for a \$2,500 loss and a recreationist's car for a \$500 loss, the loss is coded as "agency" because the agency has sustained 83 percent of the \$3,000 loss. However, if a tree fails causing a \$1,000 nonrecreationist loss, and a \$500 recreationist loss, the total \$1,500 loss is coded as a recreationist loss. Even though the recreationist sustained only 33 percent of the loss, the agency sustained less than the 80 percent guideline.)

Permittee-Concessionaire—Code as "permittee-concessionaire" when, for example, a tree fails and hits a gas station, a gift shop in a park, or a ski lift. These would not be recreationist losses unless a recreationist were directly involved with property loss or injury.

I. Consequences

Cleanup work required—The option to check this term was included on the report form to insure that only failures of appropriate size would be reported when no damage or injury occurred. If damage or injury *are* reported, code this item as 0, whether or not cleanup work is reported. Otherwise, code it as 9. Note again that if 9 is used (that is, no damage or injury), "recreationist" cannot be coded as the person affected under item H.

Property damaged—For the description of property damaged enter a brief (five letter) noun or abbreviation describing the object damaged. If no information is given about the type of damaged property, enter XXXXX to indicate that the description was not overlooked by the encoder.

Property loss—Whenever property damage is incurred, a good estimate of the loss must be assigned if not reported. If property cannot be identified, assign a minimal loss of \$10 providing that property was obviously damaged and that no further information is available.

Medical attention—When medical attention is required, it must also be coded as an injury. The converse is not necessarily true (a reported injury does not necessarily require medical attention).

Property Value and Total Value

These two items are not shown on the Failure Report. Value of the property must be estimated from the best available sources and entered on the report form (see Target Value Guide). The assigned property value should not exceed the maximum expected loss which could result from an uprooted 70-inch softwood falling on the reported target. A second entry, total value, is the sum of the property value and the amounts shown

for any injuries requiring medical attention or resulting in fatalities, as given in the Target Value Guide.

Failure Category

This item is not shown on the Failure Report.

Normal (forest, single)—The term applies to a single failure occurring on managed or occupied sites in a forested or wooded (nonurban) environment.

Catastrophe—These failures may occur on forest or urban sites.

1. Minimum number of failures is 16.
2. All failures occur at one location at the same time. Usually reports show same agency (Region, Forest, and District), hour (\pm 3 hours for failure due to wind), month, year, state, and county.
3. Failures usually involve wind, tree-striking-tree, or both. Rain or snow may be contributing factors.

In general, use discretion in identifying groups of failures as catastrophes.

Urban—The term applies to a single failure occurring on a site assigned to day use by urban populations. The significant characteristics are more intensive management of the site and heavy utilization. Urban sites may include city parks, regional parks, street parkways, some county parks and many historical sites. Usually an urban site is considered a "landscape" type, but regional and county parks may be ecologically defined forest types.

Number of Trees

This item is not shown on the Failure Report. A single failure is counted as 1. On a multiple report, however, other failures may be indicated which cannot be coded individually. The number of associated un-

coded failures plus one is entered as "number of trees."

J. Name of Site and Comments

Underline for coding significant information not otherwise coded on the report, up to a maximum of 35 characters (letters, numbers, and spaces). The name of the specific site is especially useful. Comments on targets, wind conditions, tree age, etc., may be added. Make liberal use of abbreviations, but be sure they are clear (ex.: CG for campground).

Format for ADP Cards

The ADP card used for the data management system has the standard 80 columns. One failure report requires two data cards; certain items are entered on both cards for convenience.

Card punching may be done directly from the report form if the modified version shown in *figure 1* is used. Otherwise, data from the form are transcribed to an 80-column worksheet, using the card format. In this procedure, to help maintain punching accuracy, a set of two worksheets is used, one for each of the two cards needed for each failure report.

On the data worksheets and cards, a "field" of one or more columns is set aside for each piece of information on the report form. The number of columns in a field varies according to the length of the code established for that information. The resulting fixed assignment of fields on the cards is the "card format."

ADP Card 1 Format

<u>Columns</u>	<u>Content</u>
1-5	Accession number
6	Data card number (enter 1)
7-9	Species of failing tree; 999 not permissible
11-12	Approximate DBH of tree; 99 not permissible
14-16	Approximate age of tree
18-19	Forest type
21	Stand age class
23-25	Elevation of site (divide by 100)
27	Class of mechanical failure; 9 not permissible
29-30	Defect or fault (lowest applicable code number)
32-33	Defect or fault (next higher applicable code number, if any)
35-36	Defect or fault (next higher applicable code number, if any)
38	Contributing factor (lowest applicable code number)
40	Contributing factor (next higher applicable code number, if any)
42	Contributing factor (next higher applicable code number, if any)
44-45	Agency
46	Region
47-48	Forest or Park
50-51	District
52	Subunit designation when needed
53-54	Approximate hour (24-hour clock; midnight = 24 hours); do not use 00.
56-57	Month
58-59	Year; 99 not permissible
61-62	State; 99 not permissible
63-65	County; 999 not permissible
67	Site open for public use (yes 1, no 2); 9 not permissible
69	Land ownership
71	Site category; 9 not permissible
73	Property or person directly affected; 9 not permissible
75	Property damaged (1 or 0); 9 not permissible
77	Injuries (number of injuries or 0); 9 not permissible
79	Fatalities (number of fatalities or 0); 9 not permissible
80	Cleanup work required (9 or 0)

ADP Card 2 Format

<u>Columns</u>	<u>Content</u>
1-5	Accession number (same as on card 1)
6	Data card number (enter 2)
7	Property damaged (1 or 0)
9-13	Description of property damaged (use five X's if no description given)
14-18	Property loss estimate (if there is damage, a dollar estimate must be supplied)
20	Injuries (number of injuries or 0)
22	Medical attention required (number attended or 0)
24	Fatalities (number of fatalities or 0)
26	Failure category (normal=0, catastrophe=1, urban=2)
27-31	Estimated property value (use target value guide for accident); 99999 not permissible
32	Not currently in use; zero will print out on data listing
33-38	Total value (property + injury + fatality if accident); blank or max. 999998
40-42	Number of trees (1 plus any other trees not shown in coded data, but which failed at same time)
44-78	Comments (site name and other useful data or "no comments")
80	Cleanup work required = 9; if accident, enter 0; all recorded reports should be coded either 9 or 0

FOREST TYPE CODES AND DESCRIPTIONS

The codes listed represent a condensation of a forest type classification published by the Society of American Foresters (SAF)². The code groupings are based on species composition of the stand, and frequency of the dominant and codominant trees. An effort has been made to retain broad ecological groupings in the condensation. Consequently, SAF classifications can be partially recreated in analyses by specifying appropriate limitations on species, altitude, and geographic location.

Modification of our forest type codes may be desirable when reports are being coded for areas limited to a

given Forest Service Region or other agency. Any two-digit code may be added to or substituted for the one used here. For the most part, hardwood types are not separated in the following codes. However, note types 08, 09, 10, 11, 18, 19, and 20. For studies of hardwood hazard associated with local conditions, other hardwood types can be given code numbers between 22 and 98.

In the forest type descriptions, the numbers of the SAF cover types which fall within each type code are shown at the right. If actual percentage species composition is not given, species are described as predominant—the species makes up at least 50 percent of the stand, or pure—the species composes at least 80 percent of the stand. The forest type descriptions name the species that are frequent in the type, although others are normally present.

² Society of American Foresters. 1954, reprinted 1973. *Forest cover types of North America (exclusive of Mexico)*. 67 p. Rep., Comm. Forest Types, Soc. Am. For., Washington, D.C.

Descriptions

01 (PINE TYPE)

====

PINES (*PINUS SPP.*) ARE PURE OR PREDOMINANT IN THE STAND. THIS TYPE DOES NOT INCLUDE COULTER, DIGGER, PINYON, LODGEPOLE, OR SUGAR PINE EXCEPT AS MINOR ASSOCIATES (SEE 08 CONIFER-HARDWOOD TYPE). SOME OF THE FOREST TYPES INCLUDED IN THIS GROUPING ARE:

WESTERN NORTH AMERICA

1) PONDEROSA PINE - INTERIOR AND PACIFIC	(TYPE 237, 245)
2) PONDEROSA PINE - DOUGLAS-FIR	(TYPE 244)
3) PONDEROSA PINE - LARCH - DOUGLAS-FIR	(TYPE 214)
4) JEFFREY PINE	(TYPE 247)
5) KNOBCONE PINE	(TYPE 248)
6) BRISTLEcone PINE	(TYPE 209)
7) WHITEBARK PINE	(TYPE 208)
8) WESTERN WHITE PINE	(TYPE 215)
9) LIMBER PINE	(TYPE 219)
10) MONTEREY PINE IN NATURAL ENVIRONMENT	(RANGE)

EASTERN NORTH AMERICA

1) JACK PINE	(TYPE 1, 3, 6, 8)
2) RED PINE	(TYPE 15)
3) WHITE PINE	(TYPE 20, 21, 51)
4) WHITE PINE - HEMLOCK	(TYPE 22)
5) PITCH PINE	(TYPE 45)
6) SAND PINE	(TYPE 69)
7) LONGLEAF PINE	(TYPE 70, 71, 83)
8) SHORTLEAF PINE	(TYPE 75, 76, 77)
9) VIRGINIA PINE	(TYPE 78, 79)
10) LOBLOLLY PINE	(TYPE 80, 81, 82)
11) SLASH PINE	(84, 85, 86, 99)
12) POND PINE	(TYPE 98)

ASSOCIATE SPECIES

ASSOCIATES ARE NUMEROUS, INCLUDING OTHER CONIFEROUS SPECIES AND MANY HARDWOODS.

02 (REDWOOD TYPE)

(TYPE 232)

====

REDWOOD (*SEQUOIA SEMPERVIRENS*) MAKES UP 20 PERCENT OR MORE OF THE STAND. GIANT SEQUOIA AND DAWN REDWOOD ARE NOT INCLUDED.

ASSOCIATE SPECIES

====

THE MOST COMMON ASSOCIATE OF REDWOOD IS DOUGLAS-FIR, WITH LESSER AMOUNTS OF GRAND FIR, WESTERN HEMLOCK, SITKA SPRUCE, PORT-ORFORD-CEDAR, PACIFIC YEW, WESTERN REDCEDAR, AND CALIFORNIA TORREYA. THE MOST IMPORTANT HARDWOODS ARE MADRONE AND TANOAK, WITH LESSER AMOUNTS OF CALIFORNIA LAUREL, OREGON WHITE OAK, PACIFIC WAXMYRTLE, AND OREGON ASH.

RANGE

====

COASTAL CALIFORNIA FROM SOUTHERN MONTEREY COUNTY NORTH TO THE OREGON - CALIFORNIA BORDER.

03 (DOUGLAS-FIR TYPE)

== =====

DOUGLAS-FIR IS PURE OR PREDOMINANT, INCLUDING BOTH THE PACIFIC COAST TYPE (VAR. MENZIESII) AND THE INTERIOR TYPE (VAR. GLAUCA). IN THE INTERIOR REGIONS, DOUGLAS-FIR AND WHITE FIR TOGETHER MAY PREDOMINATE. BIG CONE DOUGLAS-FIR (PSEUDOTSUGA MACROCARPA) IS NOT INCLUDED IN THIS TYPE. THE FOLLOWING ARE INCLUDED IN THIS GROUPING.

- | | |
|------------------------------------|------------|
| 1) PACIFIC DOUGLAS- | (TYPE 229) |
| 2) INTERIOR DOUGLAS- | (TYPE 210) |
| 3) DOUGLAS-FIR - WESTERN HEMLOCK | (TYPE 230) |
| 4) PORT-ORFORD-CEDAR - DOUGLAS-FIR | (TYPE 231) |

ASSOCIATE SPECIES

ALONG THE PACIFIC COAST - REDWOOD, PORT-ORFORD-CEDAR, PONDEROSA PINE, WESTERN WHITE PINE, WESTERN HEMLOCK, GRAND FIR, WESTERN REDCEDAR, PACIFIC SILVER FIR, NOBLE FIR, SITKA SPRUCE, AND INCENSE CEDAR. HARDWOOD ASSOCIATES ARE MADRONE, TANOAK, YEW, CALIFORNIA LAUREL, AND COASTAL SPECIES. INTERIOR ASSOCIATES ARE WHITE FIR, WESTERN LARCH, GRAND FIR, WESTERN WHITE PINE, PONDEROSA PINE, LODGEPOLE PINE, BLUE SPRUCE, LIMBER PINE, AND ASPEN.

04 (FIR TYPE)

== =====

- 1) WHITE FIR (TYPE 211)

WHITE FIR IS PURE OR PREDOMINANT.

ASSOCIATE SPECIES

DOUGLAS-FIR, PONDEROSA PINE, SUGAR PINE, JEFFREY PINE, LODGEPOLE PINE, WESTERN WHITE PINE, RED FIR, AND OTHER TRUE FIRS.

RANGE

SOUTHERN CASCADE MOUNTAIN RANGE AND RANGES IMMEDIATELY TO THE EAST IN OREGON AND CALIFORNIA. DOES NOT OCCUR AS A TRUE FIR TYPE IN THE INTERIOR REGIONS

- 2) RED FIR (TYPE 207)

RED FIR IS PURE OR PREDOMINANT

ASSOCIATE SPECIES

JEFFREY PINE, WESTERN WHITE PINE, LODGEPOLE PINE, AND MOUNTAIN HEMLOCK AT HIGHER ELEVATIONS. LOWER ELEVATION ASSOCIATES ARE SUGAR PINE AND WHITE FIR. OTHER ASSOCIATES ARE NOBLE FIR, WHITEBARK PINE, INCENSE CEDAR, AND DOUGLAS-FIR.

RANGE

HIGH ELEVATIONS EXTENDING FROM THE SOUTHERN SIERRA NEVADA MOUNTAINS OF CALIFORNIA INTO THE SOUTHERN CASCADES IN OREGON.

- 3) PACIFIC SILVER FIR (TYPE 226)

PACIFIC SILVER FIR IS PREDOMINANT.

ASSOCIATE SPECIES

WESTERN HEMLOCK, MOUNTAIN HEMLOCK, DOUGLAS-FIR, WESTERN REDCEDAR, NOBLE FIR, GRAND FIR, ALASKA-CEDAR, AND WESTERN WHITE PINE.

RANGE

SOUTHERN ALASKA TO SOUTHERN OREGON,

- 4) GRAND FIR

(TYPE 213)

GRAND FIR, LARCH AND DOUGLAS-FIR TOGETHER PREDOMINATE

ASSOCIATE SPECIES

LARCH, DOUGLAS-FIR, WESTERN HEMLOCK, WESTERN WHITE PINE, PONDEROSA PINE, AND ENGELMANN SPRUCE.

RANGE

NORTHERN WASHINGTON, IDAHO, MONTANA, AND OREGON.

- 5) BALSAM FIR

(TYPE 5)

BALSAM FIR IS PURE OR PREDOMINANT.

ASSOCIATE SPECIES

BLACK SPRUCE, WHITE SPRUCE, RED SPRUCE, PAPER BIRCH AND ASPEN.

RANGE

NORTHEASTERN AND LAKE STATES.

- 05 (MIXED CONIFER)

(TYPE 243)

=====

PONDEROSA PINE, SUGAR PINE, AND WHITE FIR PREDOMINATE.

ASSOCIATE SPECIES

DOUGLAS-FIR, INCENSE CEDAR, JEFFREY PINE, RED FIR, AND BLACK OAK.

RANGE

TYPICAL OF ELEVATIONS FROM 3,000 TO 6,000 FEET IN THE SIERRA NEVADA - EXTENDING FROM SOUTHERN OREGON, SOUTH TO THE MOUNTAINS OF SOUTHERN CALIFORNIA, AND WEST INTO THE COAST RANGES.

- 06 (LODGEPOLE PINE TYPE)

(TYPE 218)

=====

LODGEPOLE PINE IS PURE OR PREDOMINANT,

ASSOCIATE SPECIES

WESTERN WHITE PINE, PONDEROSA PINE, DOUGLAS-FIR, GRAND FIR, SUBALPINE FIR, ENGELMANN SPRUCE, WESTERN LARCH, ASPEN, AND MOUNTAIN HEMLOCK. (WHITE FIR, JEFFREY PINE, RED FIR, COTTONWOOD IN TAHOE REGION).

LOGEPOLE PINE TYPE (CONT.)

RANGE

SOUTHERN ALASKA SOUTH. MOST WIDELY DEVELOPED IN SOUTHERN MONTANA, NORTHERN WYOMING, CENTRAL COLORADO AND UTAH, SOUTHERN IDAHO, IN CASCADE AND SIERRA NEVADA RANGES, AND ALONG THE PACIFIC COAST.

07 (JUNIPER - PINYON TYPE)

(TYPE 66, 220,
238, 239, 240)

=====
JUNIPER OR PINYON PREDOMINATE TOGETHER OR SINGLY.

ASSOCIATE SPECIES

PONDEROSA PINE, ARIZONA CYPRESS, JEFFREY PINE, SEVERAL SCRUB OAKS, AND ASPEN

RANGE

EASTERN AND CENTRAL OREGON, SOUTHERN COLORADO AND NEW MEXICO, WESTERN UTAH, NEVADA, ARIZONA, TEXAS AND CALIFORNIA.

08 (CONIFER - HARDWOOD TYPE)

(TYPE 250)

=====
A GENERAL TYPE IN WHICH BOTH HARDWOODS AND CONIFERS OCCUR IN MIXTURE. IN CALIFORNIA IT INCLUDES DIGGER PINE (TYPE 250), COULTER PINE, AND BRISTLECONE FIR WITH SEVERAL OTHER CONIFERS OCCURRING IN MIXTURE. IN THE EASTERN UNITED STATES IT INCLUDES THE PINE-HARDWOOD TYPES, PROVIDED NEITHER PINES NOR HARDWOODS PREDOMINATE INDIVIDUALLY. USE MORE SPECIFIC TYPE DESIGNATION WHEN POSSIBLE.

09 (HARDWOOD TYPE)

=====
HARDWOODS PREDOMINATE IN THE STAND. THIS IS A GENERAL CLASSIFICATION WHICH INCLUDES NEARLY ALL DOMINANT HARDWOOD TYPES. THERE SHOULD NOT BE MANY CONIFER SPECIES PRESENT (SEE CONIFER-HARDWOOD), AND THE STAND SHOULD NOT BE OPEN (SEE WOODLAND-GRASS). NEITHER DOES THE TYPE FALL WITHIN STREAM TYPE, LANDSCAPE TYPE, ASPEN TYPE OR CHAPARRAL TYPE CATEGORIES.

10 (WOODLAND-GRASS TYPE)

=====
AREAS OF PRIMARILY HARDWOODS WITH SOME CONIFERS IN A VERY OPEN STAND INTERSPERSED WITH OPEN GRASSY AREAS. THIS TYPE IS COMMON IN THE COASTAL MOUNTAINS AND SIERRA NEVADA FOOTHILLS OF CALIFORNIA BUT IS COUNTRYWIDE IN OCCURRENCE.

11 (CHAPARRAL - MESQUITE - CHAMISA TYPE)

(TYPE 68, 242)

=====
DENSE STAND OF BROADLEAVED BRUSH OR SHRUB TREE SPECIES OF FROM 5 TO 25 FEET TALL. INCLUDES MESQUITE AND SCRUB OAKS. THIS TYPE IS TYPICAL OF POOR SITES AND ARID REGIONS OF THE WEST. LARGER TREE SPECIES MAY BE INTERSPERSED IN CHAPARRAL BUT NOT PREDOMINATE.

12 (GIANT SEQUOIA TYPE)

== =====

GIANT SEQUOIA IS PRESENT. ALSO SEE MIXED CONIFER TYPE.

ASSOCIATE SPECIES

MOST TREES OF THE MIXED CONIFER TYPE.

RANGE

SCATTERED SMALL AREAS IN THE CENTRAL SIERRA NEVADA MOUNTAINS OF CALIFORNIA.

13 (SPRUCE TYPE)

== =====

1) ENGELMANN SPRUCE - SUBALPINE FIR

(TYPE 206)

EITHER ENGELMANN SPRUCE OR SUBALPINE FIR OR A MIXTURE OF THE TWO IS PURE
OR PREDOMINANT.

ASSOCIATE SPECIES

DOUGLAS-FIR, GRAND FIR, WHITEBARK PINE, LODGEPOLE PINE, WESTERN LARCH,
WESTERN HEMLOCK, WESTERN REDCEDAR, WESTERN WHITE SPRUCE, LIMBER PINE,
AND ASPEN.

RANGE

CASCADE MOUNTAINS IN OREGON, AND THE ROCKY MOUNTAINS FROM ARIZONA AND NEW
MEXICO NORTH TO CANADA.

2) SITKA SPRUCE

(TYPE 223)

SITKA SPRUCE IS PURE (MORE THAN 80 PERCENT OF STAND)

ASSOCIATE SPECIES

WESTERN HEMLOCK, DOUGLAS-FIR, PACIFIC SILVER FIR, WESTERN REDCEDAR,
PORT-ORFORD-CEDAR, AND RED ALDER.

RANGE

COASTAL AREAS FROM ALASKA SOUTH TO NORTHERN CALIFORNIA.

3) BLUE SPRUCE

(TYPE 216)

BLUE SPRUCE IS PURE OR PREDOMINANT.

ASSOCIATE SPECIES

DOUGLAS-FIR, WHITE FIR, ENGELMANN SPRUCE, PONDEROSA PINE, AND SEVERAL
HARDWOODS.

RANGE

MOUNTAINS OF WYOMING, UTAH, COLORADO, NEW MEXICO, AND PARTS OF ARIZONA.

- 4) BLACK SPRUCE (TYPE 2, 7, 10, 12,
----- 13, 204)
BLACK SPRUCE IS PURE OR PREDOMINANT.
ASSOCIATE SPECIES

TAMARACK, BALSAM FIR, AND PAPER BIRCH.
RANGE

ALASKA TO THE LAKE STATES AND NEW ENGLAND.
- 5) WHITE SPRUCE (TYPE 4, 9, 36,
----- 201, 202)
WHITE SPRUCE IS PURE OR PREDOMINANT.
ASSOCIATE SPECIES

BIRCH, ASPEN, BALSAM POPLAR, AND BALSAM FIR.
RANGE

ALASKA SOUTHEAST TO THE GREAT LAKES AND NORTHEASTERN UNITED STATES.
- 6) SITKA SPRUCE - WESTERN HEMLOCK (TYPE 225)

EITHER SPECIES MAY PREDOMINATE.
ASSOCIATE SPECIES

DOUGLAS-FIR, WESTERN REDCEDAR, AND RED ALDER.
RANGE

KENAI PENINSULA, ALASKA, SOUTH ALONG THE COAST TO SOUTHERN OREGON.
MAY EXTEND INLAND 50 MILES.
- 7) RED SPRUCE (TYPE 30, 31, 32,
----- 33, 34)
ASSOCIATE SPECIES

YELLOW BIRCH, PAPER BIRCH, SUGAR MAPLE, BEECH, BALSAM FIR, FRASER FIR.
RANGE

NORTHERN NEW ENGLAND AND NEW YORK, PENNSYLVANIA AND APPALACHIANS.
- 14 (HEMLOCK TYPE)
== =====
- 1) MOUNTAIN HEMLOCK - SUBALPINE FIR (TYPE 205)

MOUNTAIN HEMLOCK AND SUBALPINE FIR TOGETHER PREDOMINATE,
ASSOCIATE SPECIES

ENGELMANN SPRUCE, PACIFIC SILVER FIR, NOBLE FIR, WESTERN LARCH, SUBALPINE
LARCH, WHITERACK PINE, WESTERN HEMLOCK, AND IN ALASKA, SITKA SPRUCE,
ALASKA-CEDAR, AND LODGEPOLE PINE.

RANGE

FROM CASCADE MOUNTAINS IN SOUTHERN OREGON NORTH ALONG THE COAST INTO ALASKA.

2) WESTERN HEMLOCK

(TYPE 224)

WESTERN HEMLOCK IS PURE (80 PERCENT OR MORE OF STAND)

ASSOCIATE SPECIES

SITKA SPRUCE, WESTERN REDCEDAR, AND DOUGLAS-FIR ALONG THE COAST, FURTHER INLAND, ALASKA-CEDAR, GRAND FIR, PACIFIC SILVER FIR, NOBLE FIR, SUBALPINE FIR, MOUNTAIN HEMLOCK, AND WESTERN WHITE PINE.

RANGE

SOUTHERN ALASKA, WESTERN WASHINGTON, OREGON, AND NORTHERN IDAHO.

3) EASTERN HEMLOCK

(TYPE 23, 24)

EASTERN HEMLOCK IS PURE OR PREDOMINANT.

ASSOCIATE SPECIES

YELLOW BIRCH AND OTHER HARDWOODS.

RANGE

LAKE STATES TO EAST COAST.

15 (LARCH TYPE)

== =====

1) WESTERN LARCH (*LARIX OCCIDENTALIS*)

(TYPE 212)

WESTERN LARCH IS PREDOMINANT.

ASSOCIATE SPECIES

MOST COMMONLY ASSOCIATES WITH DOUGLAS-FIR, LESS COMMON WITH LODGEPOLE PINE, GRAND FIR, WESTERN WHITE PINE, PONDEROSA PINE, WESTERN REDCEDAR, AND ENGELMANN SPRUCE.

RANGE

NORTHERN WASHINGTON, IDAHO, AND MONTANA.

2) TAMARACK (*LARIX LARicina*)

(TYPE 38)

TAMARACK IS PURE OR PREDOMINANT.

ASSOCIATE SPECIES

BLACK SPRUCE, WHITE SPRUCE, BALSAM FIR, NORTHERN WHITE-CEDAR, JACK PINE, BALSAM POPLAR, AND MANY HARDWOODS.

RANGE

EASTERN UNITED STATES TO THE LAKE STATES.

16 (CEDAR TYPE)
== =====

1) WESTERN REDCEDAR OR ALASKA-CEDAR (TYPE 227, 228)

OCCUR SINGLY AS A PURE STAND OR TOGETHER MAKE UP 80 PERCENT OF A STAND.
THIS TYPE DOES NOT INCLUDE PORT-ORFORD-CEDAR OR INCENSE-CEDAR.

ASSOCIATE SPECIES

WESTERN HEMLOCK, WESTERN WHITE PINE, ENGELMANN SPRUCE, AND GRAND FIR IN
THE NORTHERN ROCKY MOUNTAINS. WEST OF THE CASCADE RANGE ASSOCIATES ARE
DOUGLAS-FIR, WESTERN HEMLOCK, SITKA SPRUCE, AND GRAND FIR.

RANGE

NORTHERN IDAHO, WESTERN MONTANA, EASTERN WASHINGTON, AND ALONG THE COAST
FROM ALASKA TO SOUTHERN OREGON.

2) ATLANTIC WHITE-CEDAR (TYPE 97)

ATLANTIC WHITE-CEDAR CHARACTERISTICALLY PURE OR PREDOMINANT.

ASSOCIATE SPECIES

RED MAPLE, GRAY BIRCH, PITCH PINE AND POND PINE.

RANGE

EAST COAST.

3) NORTHERN WHITE-CEDAR (TYPE 37)

NORTHERN WHITE-CEDAR IS PURE OR PREDOMINATES.

ASSOCIATE SPECIES

[REDACTED] BALSAM FIR, TAMARACK, AND YELLOW BIRCH.

RANGE

LAKE STATES AND NORTHEASTERN UNITED STATES.

17 (EASTERN REDCEDAR TYPE)
== =====

1) EASTERN REDCEDAR (TYPE 46)

EASTERN REDCEDAR IS PURE OR PREDOMINANT.

ASSOCIATE SPECIES

IN THE NORTHEAST GRAY BIRCH, RED MAPLE, SWEET BIRCH, QUAKING AND BIGTOOTH
ASPEN, IN THE OZARKS THEY ARE BLACKJACK OAK, POST OAK, AND SHORTLEAF PINE

RANGE

SCATTERED THROUGH OUT THE CENTRAL FOREST AND NORTHERN PORTIONS OF THE
SOUTHERN FOREST.

2) EASTERN REDCEDAR - PINE (TYPE 47)

EASTERN REDCEDAR AND EITHER SHORTLEAF OR VIRGINIA PINE PREDOMINATE.

ASSOCIATE SPECIES

POST OAK, CHESTNUT OAK, RED OAK, RED MAPLE, AND DOGWOOD.

RANGE

SOUTHERN CENTRAL FOREST EXTENDING INTO THE NORTHERN SOUTHERN FOREST.

3) EASTERN REDCEDAR - HARDWOOD

(TYPE 48, 49)

EASTERN REDCEDAR AND SEVERAL HARDWOODS INCLUDING RED AND WHITE OAKS,
HICKORIES, AND BLACK WALNUT PREDOMINATE.

ASSOCIATE SPECIES

SHORTLEAF, LOBLOLLY AND VIRGINIA PINE, HACKBERRY, ASH, WINGED ELM,
BLACK LOCUST, DOGWOOD, BLACKGUM, AND OTHER HARDWOODS.

RANGE

SCATTERED THROUGH THE CENTRAL FOREST AND SOUTH TO MID-ALABAMA,
MISSISSIPPI AND NORTHERN ARKANSAS.

18 (ASPEN TYPE)

(TYPE 11, 16, 217)

=====
ASPEN (*POPULUS TREMULOIDES*) PURE OR PREDOMINANT. IF ASPEN CONSTITUTES LESS
THAN 50 PERCENT OF THE STAND, IT IS CONSIDERED AN ASSOCIATE SPECIES WITHIN
SOME OTHER FOREST TYPE, AS E.G., 06, 13, 01, 03, 07.

19 (LANDSCAPE TYPE)

=====

TREES USUALLY PLANTED FOR AESTHETIC PURPOSE. CHARACTERISTICALLY OPEN AS IN
WOODLAND GRASS TYPE AND PREDOMINANTLY, BUT NOT ALWAYS, HARDWOOD ORIENTED. MAY
BE EITHER EXOTIC OR NATIVE SPECIES.

20 (STREAM TYPE)

=====

RATHER NARROW BAND OF TREES USUALLY FOUND ALONG A NARROW WATERWAY.
CHARACTERISTICALLY OCCURS AT HIGHER ALTITUDES. USUALLY HARDWOOD SPECIES AND
USUALLY DIFFERENT FROM SURROUNDING FOREST TYPE. ALSO CALLED RIPARIAN TYPE.

21 (BALDCYPRESS-PONDCYPRESS TYPE)

(TYPE 100, 101,
102)

=====
ONE SPECIES IS USUALLY PREDOMINANT OR PURE. ASSOCIATE SPECIES MAY INCLUDE
TUPELO, BLACKGUM AND OTHER HARDWOODS. FOUND ON SOUTHERN FOREST FLOOD PLAINS AND
SWAMPS.

22 (PALM TYPE)

=====

ESPECIALLY REFERS TO UPPER LUQUILLO FOREST OF PUERTO RICO WHERE SIERRA PALM IS
VERY COMMON. BY EXTENSION, OTHER PALM FORESTS IF NOT FURTHER IDENTIFIED.

Associates of Softwoods by Species and Location

The following list is intended as an aid to locating or confirming the appropriate forest type code. In this list, applicable type code numbers are given by tree species and location. Species subgroupings, as defined in the preceding forest type descriptions, are shown in parentheses. Symbols for species and location are used for brevity, according to the keys which follow the list. Starred species are a major component of the type for the given location.

=====
LOCATION SYMBOLS
=====

WESTERN NORTH AMERICA

PACIFIC NORTHWEST (PNW)

WESTERN HALF OF OREGON AND WASHINGTON EXTENDING FROM THE PACIFIC COAST TO THE WESTERN BOUNDARIES OF KLAMATH, DESCHUTES, JEFFERSON, AND WASCO COUNTIES IN OREGON, AND THE WESTERN BOUNDARIES OF BENTON, GRANT AND PERRY COUNTIES OF WASHINGTON.

NORTHERN CALIFORNIA (NC)

COASTAL MOUNTAINS FROM THE OREGON BORDER SOUTH TO SAN FRANCISCO BAY.

SOUTHERN CALIFORNIA (SC)

COASTAL MOUNTAINS FROM SAN FRANCISCO BAY SOUTH TO THE MEXICO BORDER.

SIERRA NEVADA (SN)

SIERRA NEVADA MOUNTAINS OF CALIFORNIA FROM THE CALIFORNIA-OREGON BORDER SOUTH TO THE SOUTHERN BORDER OF KERN COUNTY. THIS REGION IS BOUNDED BY THE CENTRAL VALLEY ON THE WEST AND THE CALIFORNIA-NEVADA BORDER IN THE EAST.

NORTHERN ROCKY MOUNTAINS (NRM)

EASTERN HALF OF OREGON AND WASHINGTON (EASTERN BOUNDARY OF PNW), AND ALSO STATES OF IDAHO, MONTANA AND WYOMING.

CENTRAL ROCKY MOUNTAINS (CRM)

NEVADA, UTAH AND COLORADO.

SOUTHERN ROCKY MOUNTAINS (SRM) -

NEW MEXICO, ARIZONA AND THE SOUTHWESTERN PORTION OF CALIFORNIA (TO THE COASTAL MOUNTAINS IN THE WEST AND THE SIERRA NEVADA MOUNTAINS IN THE NORTH).

EASTERN NORTH AMERICA

=====

FOR A MORE COMPLETE DESCRIPTION OF THE EASTERN FOREST REGIONS SEE THE MAP IN THE SAF 'FOREST COVER TYPES OF NORTH AMERICA' AND SUBSEQUENT TYPE DESCRIPTIONS.

NORTH EASTERN FOREST (NE)

MAINE, NEW HAMPSHIRE, VERMONT, NEW YORK, AND THE NORTHERN PORTIONS OF MINNESOTA, WISCONSIN, MICHIGAN, PENNSYLVANIA AND MASSACHUSETTS.

CENTRAL EASTERN FOREST (CE)

ILLINOIS, INDIANA, OHIO, MISSOURI, KENTUCKY AND TENNESSEE.

SOUTH EASTERN FOREST (SE)

NORTH CAROLINA, SOUTH CAROLINA, GEORGIA, ALABAMA, MISSISSIPPI, ARKANSAS, LOUISIANA, FLORIDA, AND PARTS OF TEXAS AND VIRGINIA.

AGENCY CODES – OUTLINE

Codes have been assigned to agencies and their individual units to permit recall and analysis of information according to agency or unit. The fields 44-48 and 50-51 in the card 1 format are used for this purpose. In general, as shown earlier in the description of card formats, the parent agency is identified by the first two digits, the next subdivision by the third digit, and the following two levels by two digits each in columns 47-48 and 50-51.

In the outline of codes, which is arranged in alphabetic order, the two-digit codes for the agency are shown, followed by zeros. (In a few cases, three digits are used.) The subunit codes are given in the detailed listing which follows the outline, to the extent that specific codes have been assigned. The detailed listing is given in approximate numerical order of codes, so that a particular agency can be located by the general code shown in the outline.

New numbers should be assigned to agency units as they change boundaries, and old numbers should be permanently retired to avoid confusion.

Unique State agency codes are not required for most States because the State identity is separately established in the card format. Thus, when data of a given organization in a given State are to be analyzed (using the FAILURE program), selection is made first for State, and then for Agency.

To code an agency in a State for which the State agencies are not listed in this outline,

1. Use the general code number assigned to the parallel agency in California, if any. In particular, use 52000 00 for the Department of Parks and Recreation of any State. Do not use 52000 00 for any agency other

than Parks and Recreation, or for any level lower than State.

2. If no parallel agency has been assigned a code in California, use the 58000 00 series. Appropriate code numbers for the agency and subunits may be assigned as needed, following the general plan—for example, 5810101 might designate a State agency and subunit in Massachusetts for which there is no parallel in California.

State Parks of some participating States are individually named and numbered in the code (for example, see California State Parks codes). Again, parks in two or more States may have the same code but are always separable by the State code.

It should be noted that for Regional, County, or City organizations, or for Private Property (70000 00), the functional designation is shown in the third column of the field (column 46 on data card 1) using codes shown in the footnote. City identity is defined in the last four columns (47-48 and 50-51) using the GSA *Worldwide Geographic Location Codes* (U.S. General Services Administration, Office of Finance, 1976, 381 p.). The County is already defined in the State and County coding field, and should not be repeated. Regional character of an agency subunit is shown by the code 1 in column 52. Additional functional codes may be added as needed, as illustrated by the examples in the footnote. In conjunction with the State, County, and City codes, these agency codes will permit selection of data for listing or for analysis from the computer data file for any individual public agency below the State level.

STATE AND COUNTY CODES

State and County codes were assigned before the GSA *Worldwide Geographic Location Codes* became available. They may be changed, if desired, by agencies maintaining their own records. The codes used here are generally arranged in alphabetic order by State and by County within State.

General

Agency

Recreationist

Forest industry

Permittee/Concessionaire

Other: _____

Contractor

Public utility

(I) Consequences

Clean-up work required

Property damaged

Property loss estimate \$

Injuries (Do not give dollar value)

Medical attention required

Fatalities

(J) Name of site⁽³⁾

Comments: _____

Only failures of a size capable of inflicting some damage or injury should be reported. Minor limb failures should not be reported unless they were potentially dangerous. Do not report simple break of a lone segment of a tree unless it resulted in mechanical failure. Trees removed prior to failure should not be reported.

- A report should be made for:
- (1) each tree failure involving property damage or bodily injury;
 - (2) each failure adjacent to permanent recreation facilities, home sites, or other locations where failures are a threat to property and;
 - (3) each failure on recreation sites and other high-use locations during the season of potential use, whether or not the failure causes damage or injury.
- Check only those defects and contributing factors which lead to the actual failure.
- Other established public use site. Winter sports, beaches, viewpoints, visitor centers, historical buildings, etc.
- Volunteer site. Undeveloped site with concentrated public use.
- Special use site. Resorts, service facilities, etc.
- Residence site. Agency, private, or permittee-lessee.
- Other. Wilderness areas sites, open forest, etc.
- Published analyses will not indicate the source or specific incidence

If many failures occur in your area, reports may be limited to managed sites, usually subject to interpretation and hazard control. Where information is available, however, reports from volunteer and other nonengineered sites will be of value.

NOTE: A SEPARATE FORM SHOULD BE COMPLETED FOR EACH INDIVIDUAL FAILURE. Inclusion of more than one failure per a report prevents compilation of data, unless all details are identical.

Additional forms may be obtained from your headquarters or by writing to the following address:

Reports to: Lee A. Price
U.S.D.A. Forest Service
P.O. Box 245
Berkeley, California 94701

Commercial Phone: (415) 456-1158
FIS Phone: 449-3158

 Residence site ^(D)
 Other: _____
 Urban

(I) Property or person directly affected

- Agency
 Recreational
 Forest industry
 Permittee-Concessionaire
 Other: _____
 Contractor
 Public utility

(J) Consequences

- Clean-up work required
 Property damaged: _____
 Property loss estimate: \$ _____
 Injuries: ^(D) (Check all that apply)
 Medical attention required
 Fatalities

Only failures of a size capable of inflicting some damage or injury should be reported. Minor limb failures should not be reported unless they were potentially dangerous. Do not report simple death of a tree or part of a tree unless it resulted in significant damage. Trees removed prior to failure should not be reported.

- (C) A report should be made for:
- each tree failure resulting property damage or bodyly injury;
 - each failure adjacent to permanent recreation facilities, home sites, or other locations where failure is a threat to property, and,
 - each failure on recreation sites and other high use locations during the season of public use, whether or not the failure causes damage or injury.
- (D) Check only those defects and contributing factors which lead to the actual failure.
- (E) Other established public use site: Winter sports, beaches, viewpoints, visitor centers, historical buildings, etc.
- (F) Volunteer site: Undeveloped site with concentrated public use.
- (G) Special use site: Resorts, service facilities, etc.
- (H) Residential site: Agency, private, or permittee-lessee.
- (I) Other: Wilderness area sites, open forest, etc.
- (J) Published analyses will not indicate the source of specific incidents.

If many failures occur in your area, reports may be limited to managed sites normally subject to inspection and hazard control. Where information is available, however, reports from volunteer and other non-inspected sites will be of value.

NOTE - A SEPARATE FORM SHOULD BE COMPLETED FOR EACH INDIVIDUAL FAILURE. inclusion of more than one failure on a report presents correlation of data unless all details are identical.

Additional forms may be obtained from your Headquarters or by writing to the following address:

The Forest Service of the U.S. Department of Agriculture

- ... Conducts forest and range research at more than 75 locations from Puerto Rico to Alaska and Hawaii.
- ... Participates with all State forestry agencies in cooperative programs to protect and improve the Nation's 395 million acres of State, local, and private forest lands.
- ... Manages and protects the 187-million-acre National Forest System for sustained yield of its many products and services.

The Pacific Southwest Forest and Range Experiment Station

represents the research branch of the Forest Service in California and Hawaii.
